

HUSKY'S COMMUNITY REBATE PROGRAM

Members List • Record Card

Organization Administrators

Before you distribute the cards to your members, we recommend matching individual card numbers to your members. This will allow you to track both heavy and light users of the program, and in the event of any service related issues, tracking specific purchases to members. This could be important for you as you look for new ways to generate more funds for your organizations. Use this card to track the first 170 cardholders. For more cardholders, please create a supplemental list.

What's in the number?

16 digits explained.

Of the 16 digits on the card, there are really six you need to be aware of for recording and tracking purposes. The last digit (the digit furthest to the right) is a random check number. The next (to last) five digits are used to distinguish the individual cards and their sequence in your group.

For example, if the last six digits of a card are "004637", the number shows this is the 463rd card in your group. The "7" is a

check number, and has no bearing on the sequence.

All cards are produced sequentially by Husky. If supplemental orders for cards are placed at a later date, there will be no duplication.

For additional card orders please e-mail: communityrebate@huskyenergy.com.
